

JAMES RIVER

MANUFACTURING

Tank Refurbishing Progress

James River Manufacturing provides the highest quality of craftsmanship in the industry, and is paired with unparalleled customer service, integrity and transparency.

KEEP TRACK OF YOUR TANK PROGRESS

Our industry first, custom application enables you to track the progress and completion of your tanks in such detail that it's like they never left your yard!

Our seasoned logistic professionals will associate our bar code with each tank's serial number by scanning the code into our system. Photos of each tank are taken to identify any defects, and a permanent record is made.

JAMES R RIVER

— MANUFACTURING —

After assignment and loading is finished, you will automatically receive a notification text or e-mail identifying serial number, size and other pertinent information.

The screenshot displays the 'Test Customer - Portal' interface. At the top left is the James River Manufacturing logo and the word 'Orders'. Below this, there are three main data panels: 'Tanks', 'Batches', and 'Orders'. The 'Tanks' panel shows 3 picked up tanks, 0 delivered tanks, and a total of 3 tanks. The 'Batches' panel shows 0 open batches, 0 completed batches, and a total of 1 batch. The 'Orders' panel shows 0 open orders, 0 completed orders, and a total of 1 order. A copyright notice for 2020 James River Manufacturing is at the bottom.

Tanks	Batches	Orders
Number of Picked Up Tanks: 3	Open Batches: 0	Number of Open Orders: 0
Number of Delivered Tanks: 0	Completed: 0	Number of Completed Orders: 0
Total Number of Tanks: 3	Total Number of Batches: 1	Total Number of Orders: 1

Our sandblast professionals will scan the tank to verify correct batch and ownership. They will then suspend your tanks on our I-beam system and remove years of layered paint, rust and grime down to a white metal finish.

Inspection of tanks and paint preparation is vital to the longevity of your tank's refurbish. At the raw metal state, we will perform a detailed inspection and prepare tanks for paint.

We have teamed with paint industry leader, Axalta, to provide an etching enamel primer along with one of the toughest Polyurethane enamel painting systems for superior protection that won't compromise on appearance.

Old valves are removed, the appropriate amount of methanol is added and REGO® valves are installed. After this, air is purged with propane vapor, and a leak check is performed, as well as a final inspection.
